Grade 20.33 out of 30.00 (67.78%)

Question **1**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

You are developing a game, and you need to break out of a loop once a certain condition is met.

Question: Identify the code snippet that correctly uses a **break** statement to exit a loop after printing the message "Game Over" five times.

Select one:

☐ a.

```
int i = 0;
do {
    System.out.println("Game Over");
    if (i == 4) break;
    i++;
} while (i < 5);
```

☒ b.

```
for (int i = 0; i < 10; i++) {
    if (i == 5) break;
    System.out.println("Game Over");
}
```

☐ c.

```
int i = 0;
while (i < 5) {
    System.out.println("Game Over");
    i++;
}
```

☐ d.

```
int i = 0;
while (true) {
    System.out.println("Game Over");
    i++;
    if (i == 5) break;
}
```

Your answer is correct.

Question **2**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A program needs to skip odd numbers and only print even numbers.

Question: Guess the output of the following code snippet.

```
for (int i = 1; i <= 5; i++) {  
    if (i % 2 != 0) {  
        continue;  
    }  
    System.out.println(i);  
}
```

Select one:

☐ a.

2 3 4 5

☒ b.

2 4

☐ c.

1 2 3 4 5

☐ d.

1 3 5

Your answer is correct.

Question **3**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A program needs to execute a block of code at least once and then repeat it based on a condition. **Question:** Select the snippet that correctly represents a do-while loop in Java.

Select one:

☐ a.

```
do {  
    action();  
} until (condition);
```

☐ b.

```
do action();  
while (condition);
```

☒ c.

```
do {  
    action();  
} while (condition);
```

☐ d.

```
do (condition) {  
    action();  
} while;
```

Your answer is correct.

Question **4**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A program is designed to run indefinitely until a shutdown signal is received.

Question: Which of the following represents an infinite loop in Java?

Select one:

☐ a.

```
for (;;) { listenForShutdown(); }
```

☒ b. All of the above

☐ c.

```
do { listenForShutdown(); } while (true);
```

☐ d.

```
while (true) { listenForShutdown(); }
```

Your answer is correct.

Question **5**

Complete

Mark 0.00 out of 1.00

🚩 Flag question

You are writing a function that finds if the digit '5' is present in an integer.

Question: Which method implementation correctly determines if the number contains the digit '5'?

Select one or more:

☒ a.

```
public static boolean containsFive(int number) {  
    return String.valueOf(number).contains("5");  
}
```

☐ b. None of the options are correct

☐ c.

```
public static boolean containsFive(int number) {  
    int digit;  
    do {  
        digit = number % 10;  
        if (digit == 5) {  
            return true;  
        }  
        number /= 10;  
    } while (number > 0);  
    return false;  
}
```

☐ d.

```
public static boolean containsFive(int number) {  
    for (int i = number; i > 0; i /= 10) {  
        if (i % 10 == 5) {  
            return true;  
        }  
    }  
    return false;  
}
```

☐ e.

```
public static boolean containsFive(int number) {  
    while (number > 0) {  
        if (number % 10 == 5) {  
            return true;  
        }  
        number /= 10;  
    }  
    return false;  
}
```

Your answer is incorrect.

Question **6**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

During code review, you find a piece of code that seems to be an infinite loop.

Question: Identify the snippet that would cause an infinite loop.

Select one:

☐ a.

```
int i = 5;  
while (i <= 50) {  
    System.out.println(i);  
    i += 5;  
}
```

☐ b.

```
int i = 10;  
while (i <= 100) {  
    System.out.println(i);  
    i += 10;  
}
```

☐ c.

```
int i = 1;  
while (i != 10) {  
    System.out.println(i);  
    i += 2;  
}
```

☒ d.

```
int i = 0;  
while (true) {  
    System.out.println("Hello");  
}
```

Your answer is correct.

Question **7**

Complete

Mark 0.00 out of 1.00

🚩 Flag question

You are building a calculator app that includes a factorial function.

Question: Identify the method that correctly calculates the factorial of a given number using loops.

Select one or more:

☒ a.

```
public static int factorial(int n) {  
    int result = 1;  
    for (int i = 1; i <= n; i++) {  
        result *= i;  
    }  
    return result;  
}
```

☐ b.

```
public static int factorial(int n) {  
    int result = 1, i = n;  
    do {  
        result *= i--;  
    } while (i > 0);  
    return result;  
}
```

☐ c.

```
public static int factorial(int n) {  
    if (n == 0) return 1;  
    return n * factorial(n - 1);  
}
```

☐ d.

```
public static int factorial(int n) {  
    int result = 1, i = 1;  
    while (i <= n) {  
        result *= i++;  
    }  
    return result;  
}
```

Your answer is incorrect.

Question **8**

Complete

Mark 0.00 out of 1.00

🚩 Flag question

You need to implement a method that will execute at least once regardless of the condition.

Question: Choose the correct implementation using a **do-while** loop that prints "Hello World" at least once.

Select one or more:

☐ a.

```
do {  
    System.out.println("Hello World");  
} while (true);
```

☐ b.

```
while (false) {  
    System.out.println("Hello World");  
}
```

☒ c.

```
do {  
    System.out.println("Hello World");  
    break;  
} while (true);
```

☐ d.

```
do {  
    System.out.println("Hello World");  
} while (false);
```

Your answer is incorrect.

Question **9**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A code challenge requires you to reverse the digits of a given number.

Question: Which method correctly reverses the digits of an integer?

Select one:

☐ a. None of the options are correct

☐ b.

```
public static int reverseNumber(int number) {  
    int reversed = 0;  
    for (; number != 0; number /= 10) {  
        reversed = (reversed * 10) + (number % 10);  
    }  
    return reversed;  
}
```

☐ c.

```
public static int reverseNumber(int number) {  
    int reversed = 0, remainder;  
    do {  
        remainder = number % 10;  
        reversed = reversed * 10 + remainder;  
        number /= 10;  
    } while (number > 0);  
    return reversed;  
}
```

☐ d.

```
public static int reverseNumber(int number) {  
    int reversed = 0;  
    while (number != 0) {  
        reversed = reversed * 10 + number % 10;  
        number /= 10;  
    }  
    return reversed;  
}
```

☒ e. All options are correct

☐ f.

```
public static int reverseNumber(int number) {  
    StringBuilder sb = new StringBuilder(String.valueOf(number));  
    return Integer.parseInt(sb.reverse().toString());  
}
```

Your answer is correct.

Question **10**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

You've found a bug in a program where the loop control variable is not being updated correctly.

Question: Choose the faulty code snippet where the loop control variable is incorrectly updated, leading to a potential infinite loop.

Select one:

☐ a.

```
int i = 10;
while (i > 0) {
    System.out.println(i);
    i--;
}
```

☒ b.

```
int i = 0;
while (i < 10) {
    System.out.println("Counting: " + i);
}
```

☐ c.

```
for (int i = 0; i < 10; i += 2) {
    System.out.println("Even number: " + i);
}
```

☐ d.

```
int i = 1;
do {
    System.out.println("Number: " + i);
    i = i * 2;
} while (i < 100);
```

Your answer is correct.

Question **11**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A developer writes a nested loop to process a matrix.

Question: Select the code snippet that correctly uses nested loops to process a 3x3 matrix.

Select one:

☐ a.

```
for (int i = 0; i < 3; i++)
    for (int j = 0; j < 3; j++)
        process(matrix[i][j]);
```

☒ b.

```
for (int i = 0; i < 3; i++) {
    for (int j = 0; j < 3; j++) {
        process(matrix[i][j]);
    }
}
```

☐ c.

```
int i = 0;
while (i < 3) {
    int j = 0;
    while (j < 3) {
        process(matrix[i][j]);
        j++;
    }
    i++;
}
```

☐ d.

```
for (int[] row : matrix) {
    for (int val : row) {
        process(val);
    }
}
```

Your answer is correct.

Question 12

Complete

Mark 0.00 out of 1.00

🚩 Flag question

You need to create an array to store temperatures for a week.

Question: How would you correctly declare and initialize an array in Java for this purpose?

Select one or more:

☐ a.

```
int[] temperatures = new int[7];
```

☒ b.

```
int[] temperatures = {0, 0, 0, 0, 0, 0, 0};
```

☐ c.

```
int temperatures = new int[7];
```

☐ d.

```
int temperatures[] = new int[7];
```

Your answer is incorrect.

Question 13

Complete

Mark 0.00 out of 1.00

🚩 Flag question

A program needs to iterate over an array of integers to sum all its elements.

Question: Which line correctly uses the array's length to set the loop's boundary?

Select one:

☐ a.

```
for (int i = 1; i <= arr.length(); i++)
```

☐ b.

```
for (int i = 0; i < arr.length; i++)
```

☒ c.

```
for (int i = 0; i < arr.length - 1; i++)
```

☐ d.

```
for (int i = 0; i <= 10; i++)
```

Your answer is incorrect.

Question **14**

Complete

Mark 0.00 out of 1.00

🚩 Flag question

You have an array of daily sales figures and need to print the sales of the third day.

Question: Select the correct way to access the third element in the array `int[] sales = {150, 220, 300, 250, 400};`.

Select one or more:

☒ a.

```
System.out.println(sales[2]);
```

☐ b.

```
System.out.println(sales[3]);
```

☐ c.

```
System.out.println(sales[3-1]);
```

☐ d.

```
System.out.println(sales[2+1]);
```

Your answer is incorrect.

Question **15**

Complete

Mark 0.33 out of 1.00

🚩 Flag question

A search algorithm stops once a target item is found.

Question: Select the snippet that uses a break statement correctly.

Select one:

☐ a.

```
int i = 0;
while (array[i] != target) {
    i++;
    if (i == array.length) {
        break;
    }
}
```

☒ b.

```
for (int i = 0; i < array.length; i++) {  
    if (array[i] == target) {  
        break;  
    }  
}
```

☐ c.

```
do {  
    if (findTarget()) {  
        break;  
    }  
} while (true);
```

☐ d. All of the above

Your answer is partially correct.

Question 16

Complete

Mark 0.00 out of 1.00

🚩 Flag question

A scoreboard tracks high scores and you need to find the highest score.

Question: Which method correctly finds the maximum score in an array `int[] scores = {75, 88, 92, 67, 100};`?

Select one or more:

☐ a.

```
public static int findMax(int[] array) {  
    int max = 0;  
    for (int i = 0; i < array.length-1; i++) {  
        max = Math.max(max, array[i]);  
    }  
    return max;  
}
```

☒ b.

```
public static int findMax(int[] array) {  
    int max = array[0];  
    for (int i = 1; i < array.length; i++) {  
        if (array[i] > max) {  
            max = array[i];  
        }  
    }  
    return max;  
}
```

☐ c.

```
public static int findMax(int[] array) {  
    Arrays.sort(array);  
    return array[array.length - 1];  
}
```

☐ d.

```
public static int findMax(int[] array) {  
    int max = Integer.MIN_VALUE;  
    for (int j : array) {  
        max = Math.max(max, j);  
    }  
    return max;  
}
```

Your answer is incorrect.

Question **17**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A user's input is being stored in an array and you need to update the fifth element with a new value.

Question: Select the correct statement to update the fifth element in `int[] userInput = new int[10];` to 99.

Select one:

☐ a.

```
userInput[5] = 99;
```

☐ b.

```
userInput[4]++;
```

☒ c.

```
userInput[4] = 99;
```

☐ d.

```
userInput[5]--;
```

Your answer is correct.

Question **18**

Complete

Mark 0.00 out of 1.00

🚩 Flag question

An array contains a sequence of integers, and you need to calculate the sum of even numbers.

Question: Which snippet sums only the even numbers in `int[] numbers = {1, 2, 3, 4, 5, 6};`?

Select one or more:

☒ a.

```
int sum = 0;
for (int number : numbers) {
    if (number % 2 == 0) {
        sum += number;
    }
}
```

☐ b.

```
int sum = IntStream.of(numbers).filter(n -> n % 2 == 0).sum();
```

☐ c.

```
int sum = 0;
for (int i = 0; i < numbers.length; i += 2) {
    sum += numbers[i];
}
```

☐ d.

```
int sum = 0;
for (int i = 0; i < numbers.length; i++) {
    if (numbers[i] % 2 == 0) {
        sum += numbers[i];
    }
}
```

Your answer is incorrect.

Question **19**

Complete

Mark 1.00 out of 1.00

🚩 Flag question

A developer needs to iterate over an array of integers.

Question: Choose the code snippet that correctly iterates over an array using a for loop.

Select one:

☐ a.

```
for (i = 0; i < array.length; i++) { process(array[i]); }
```

☐ b.

```
for i in range(0, array.length): process(array[i])
```

☐ c.

```
for (int i; i < array.length; i++) { process(array[i]); }
```

☒ d.

```
for (int i = 0; i < array.length; i++) { process(array[i]); }
```

Your answer is correct.

Question **20**

Not answered

Marked out of 1.00

🚩 Flag question

You need to create a backup of an array before performing operations on it.

Question: Which statement correctly creates a copy of `int[] original = {5, 10, 15, 20};`?

Select one or more:

☐ a.

```
int[] backup = original;
```

☐ b.

```
int[] backup = original.clone();
```

☐ c.

```
int[] backup = new int[original.length];
System.arraycopy(original, 0, backup, 0, original.length);
```

☐ d.

```
int[] backup = Arrays.copyOf(original, original.length);
```

Your answer is incorrect.

Question **21**

Correct

Mark 5.00 out of 5.00

🚩 Flag question

You're given an array of integers, and you need to calculate the sum of all the even numbers in this array.

Question: Write a method **sumOfEvenNumbers** that takes an array of integers and returns the sum of all the even numbers in the array.

Answer: (penalty regime: 0 %)

Reset answer

```
1 1 /*
2   DON'T WRITE any main method ANYWHERE
3   DON'T WRITE ANY READING / PRINTING STATEMENTS, IF NOT ASKED
4   YOU CAN WRITE YOUR OWN METHODS, IF NEEDED
5  */
6  // Write your code below this line
7  public int sumOfEvenNumbers(int []array){
8      int sum=0;;
9      for(int values:array){
10         if(values%2==0){
11             sum+=values;
12         }
13     }return sum;
14 }
15
```

	Test	Expected	Got	
✓	System.out.println(sumOfEvenNumbers(new int[]{1, 2, 3, 4, 5}));	6	6	✓
✓	System.out.println(sumOfEvenNumbers(new int[]{10, 23, 3, 4, 15}));	14	14	✓
✓	System.out.println(sumOfEvenNumbers(new int[]{0, 2, 3}));	2	2	✓
✓	System.out.println(sumOfEvenNumbers(new int[]{2, 4, 6, 8, 10}));	30	30	✓

Passed all tests! ✓

Correct

Marks for this submission: 5.00/5.00.

Question **22**

Correct

Mark 5.00 out of 5.00

🚩 Flag question

In a survey of favorite numbers, you need to find out how often a particular number appears.

Question: Write a method **countOccurrences** that takes an array of integers and an integer representing the number to find. The method should return the count of occurrences of that number in the array.

Answer: (penalty regime: 0 %)

Reset answer

```
1 1 /*
2   DON'T WRITE any main method ANYWHERE
